

Automatic Feeder for Stray cats

Tan Yuchen 20032211

STORYBOARD

There were a lot of stray cats in my university.

STORYBOARD

Then many students will come to feed them.

STORYBOARD

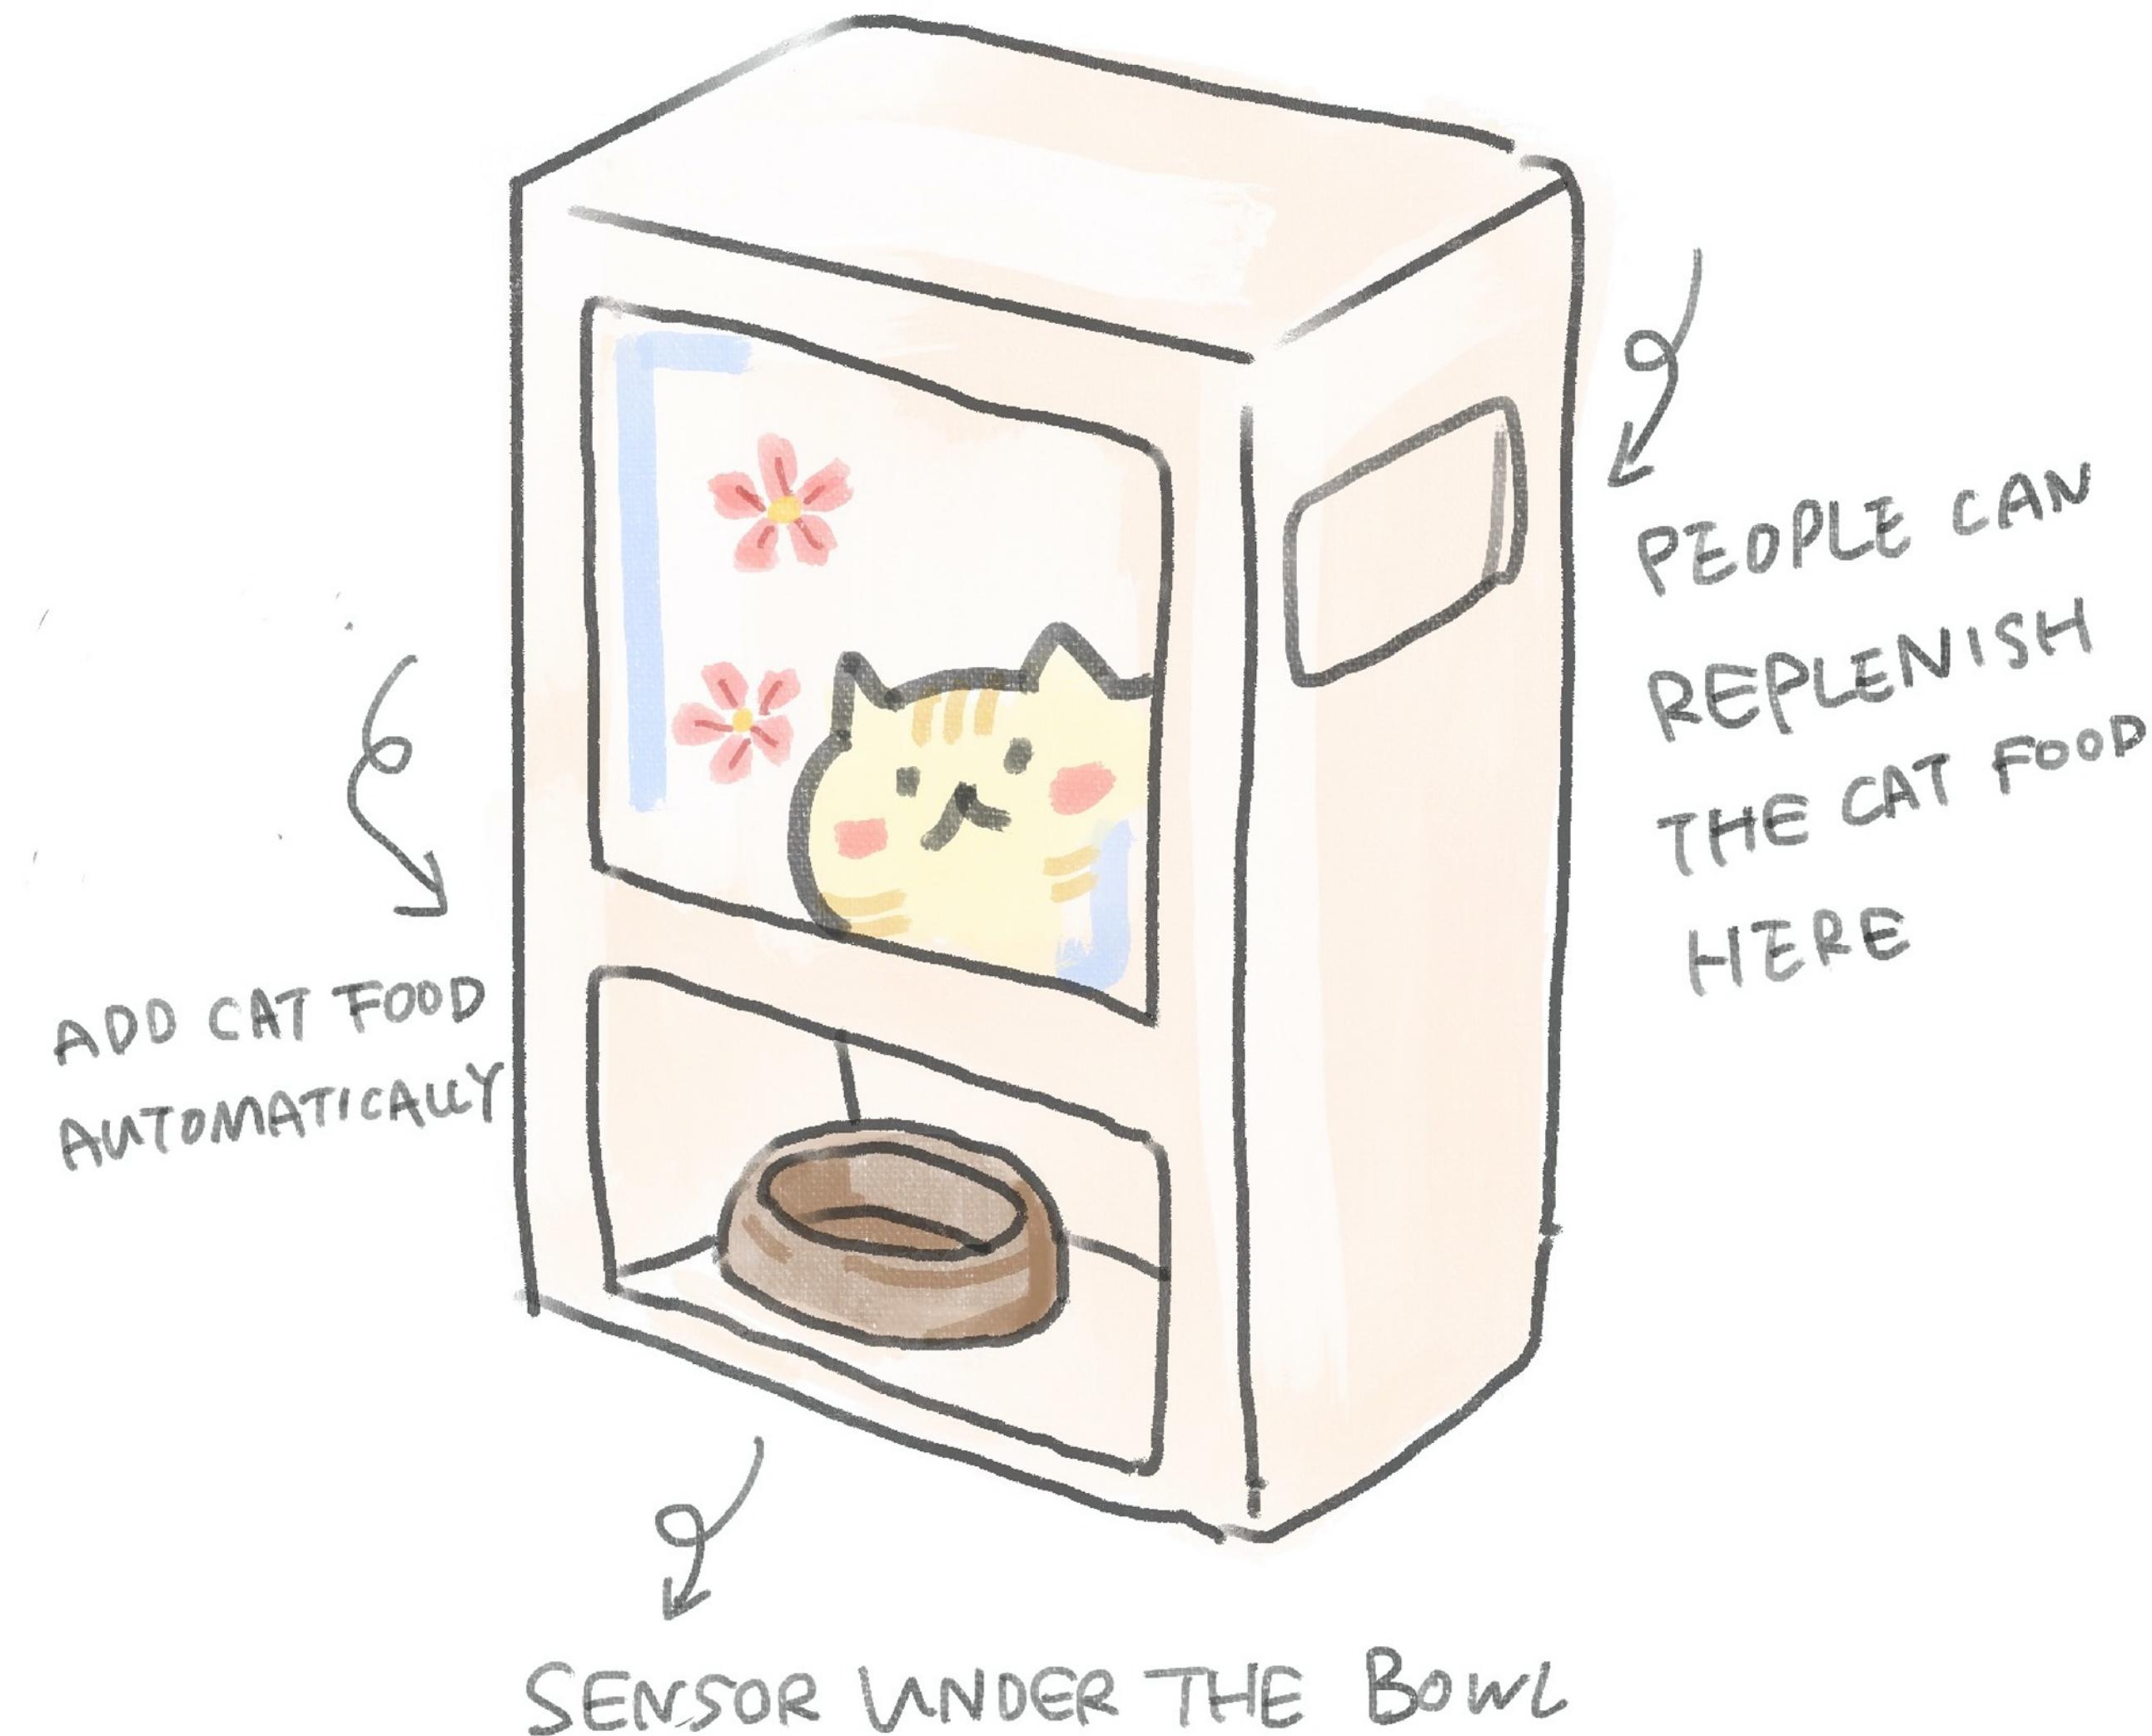

But cat food on the floor is dirty and unattractive.

STORYBOARD

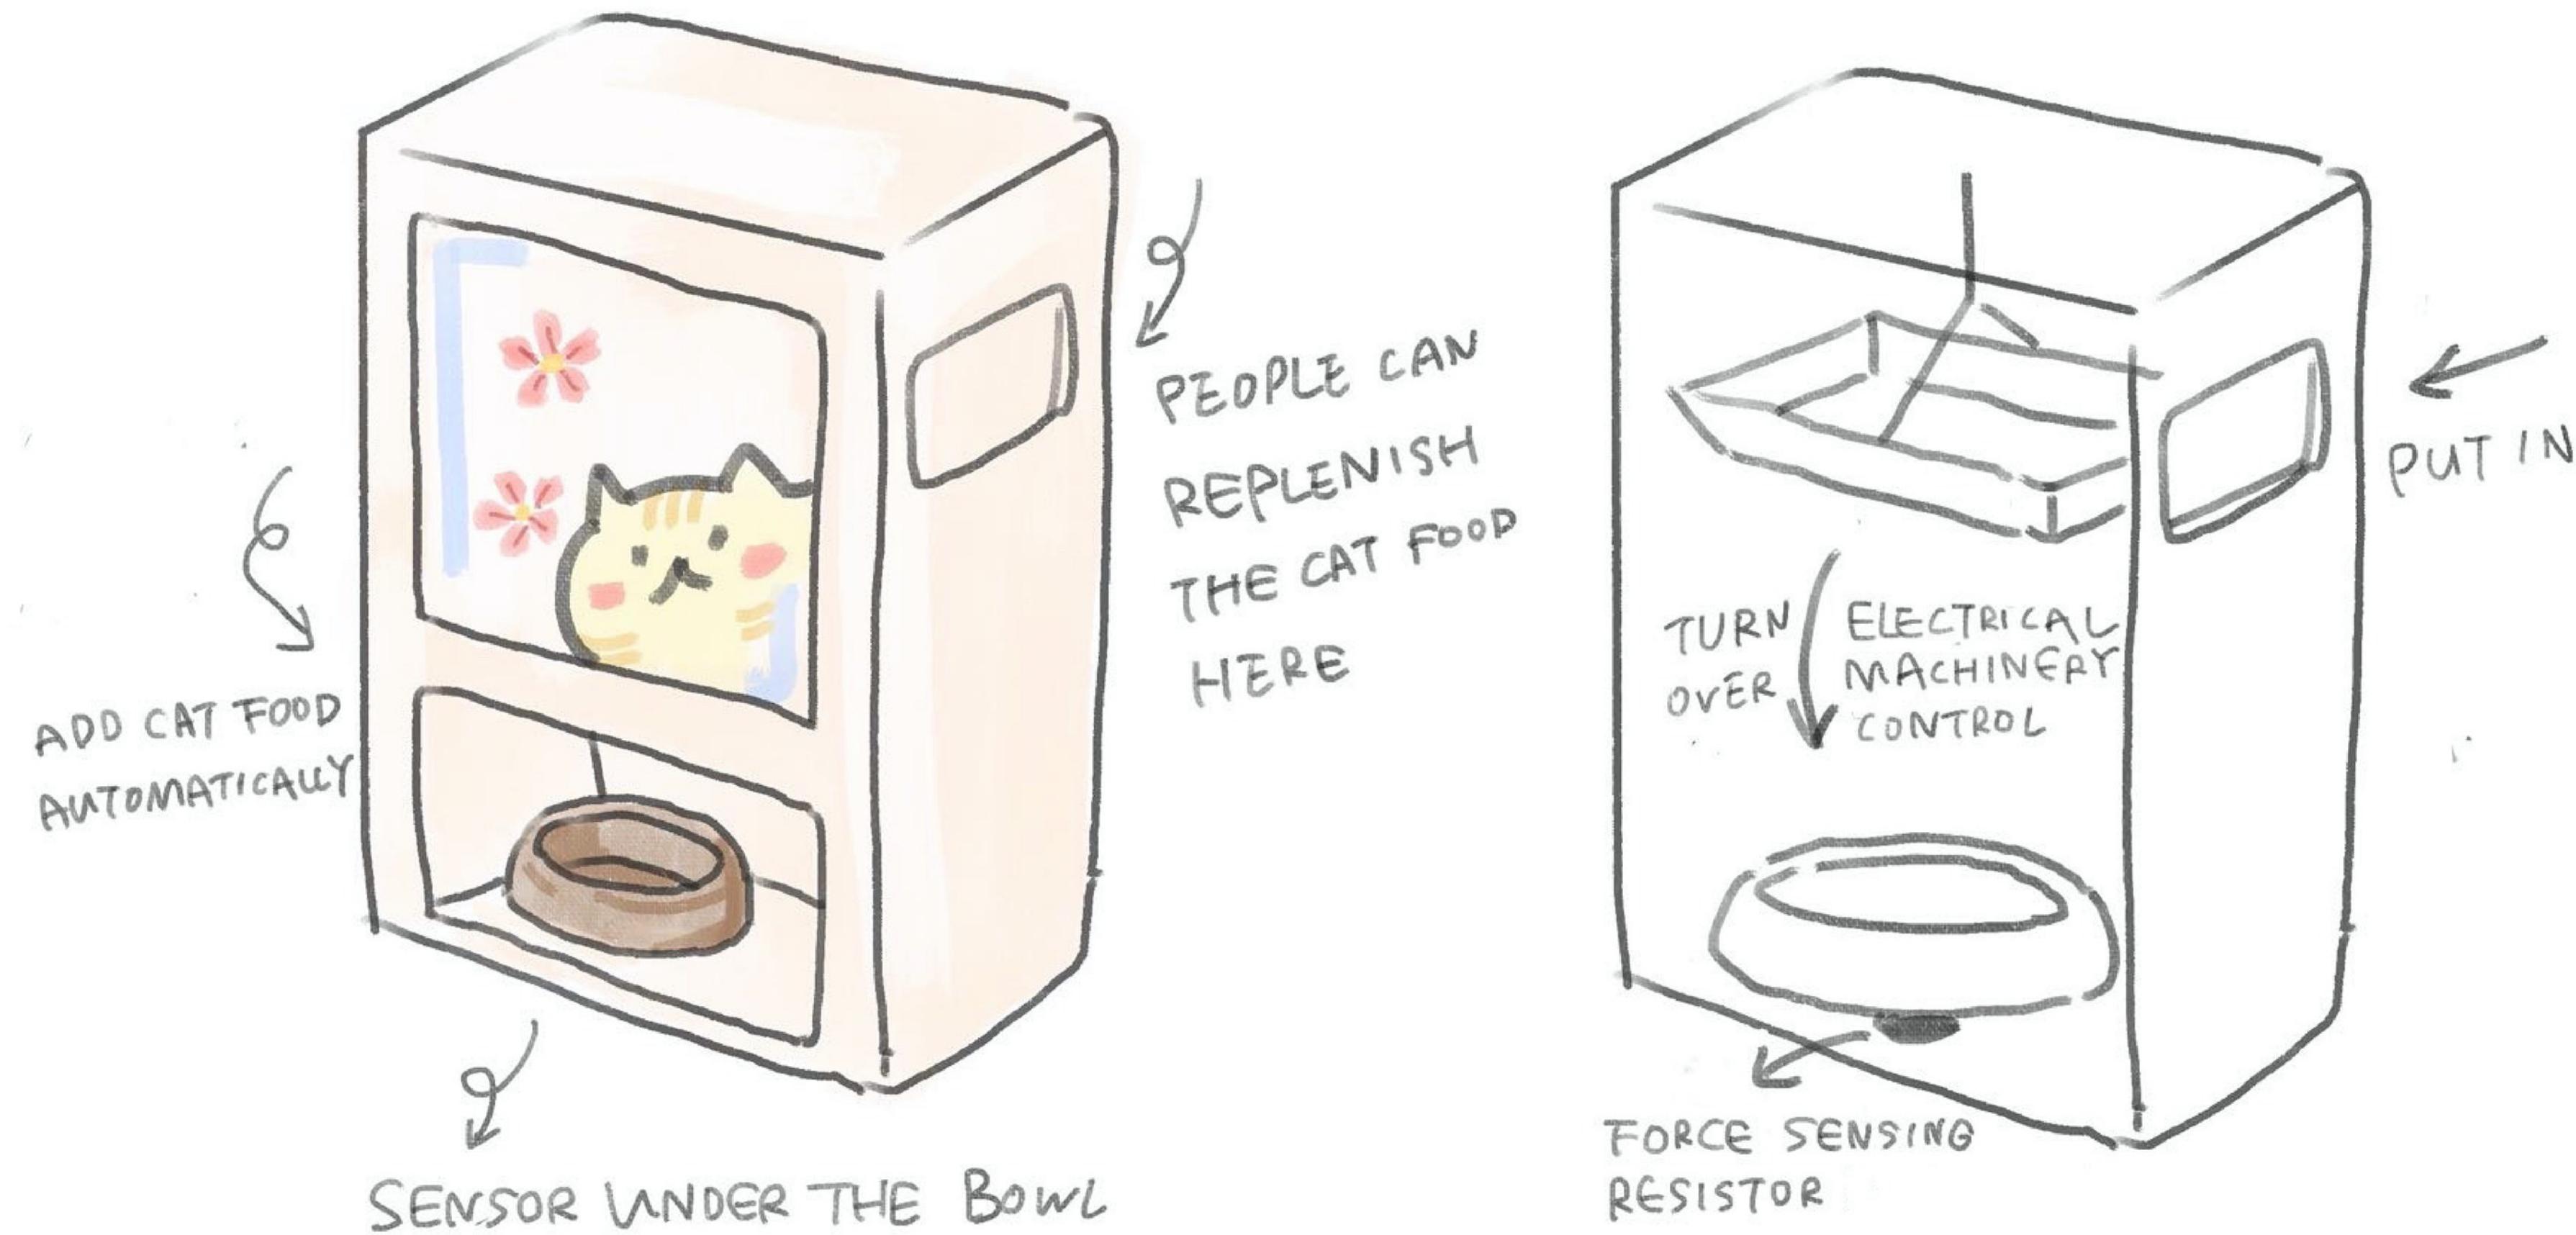

Then I remembered the automatic water feeder for my pet at home.

STORYBOARD

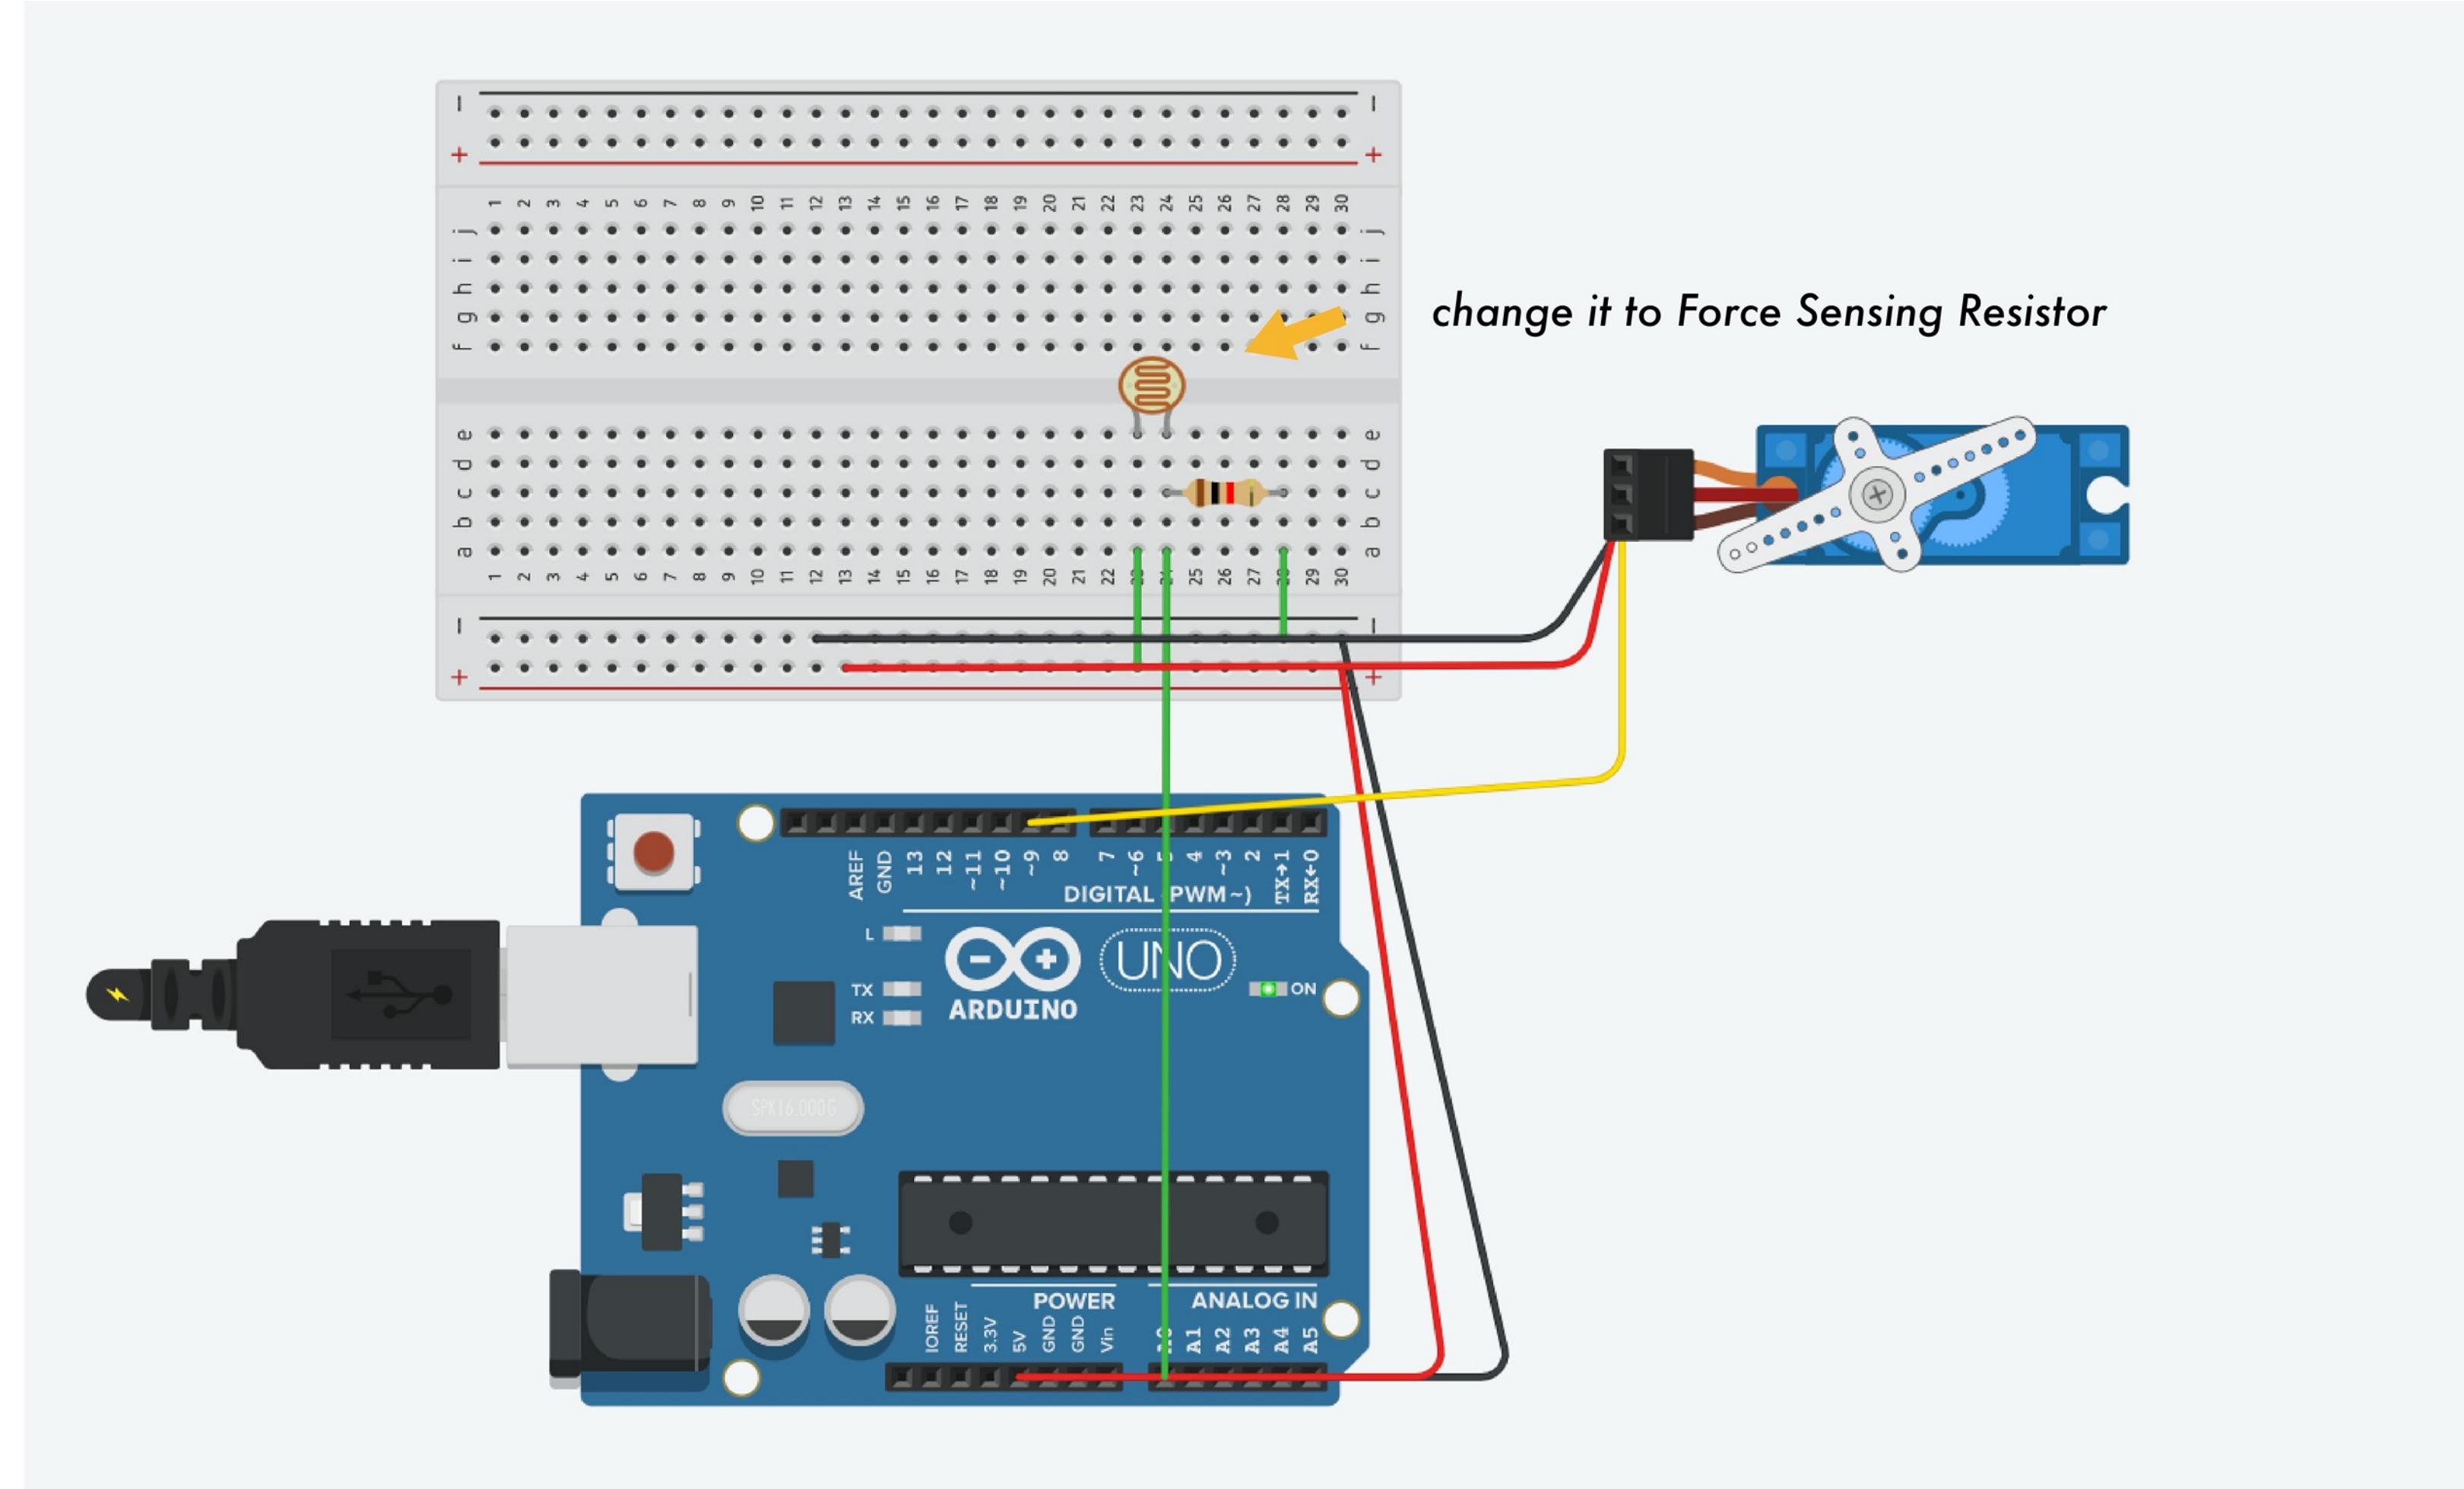

So I wanted to use the sensor to build a device that feeds stray cats automatically.

STORYBOARD

The device looks like a vending machine for cats, and when the sensor detects a shortage of cat food at the bottom, it will automatically replenish it. Also, students can supplement cat food on the side.
